

Istacherni Frontend Technical Report

This report provides a comprehensive overview of the **Istacherni Frontend**, detailing its architecture, technology stack, and core features.

Architecture Overview

The frontend is built as a modern mobile application using **React Native** and the **Expo** ecosystem. It utilizes a modular, file-based routing system and a robust API client to communicate with the legal RAG backend.

Core Technology Stack

Layer	Technology
Framework	Expo (SDK 54)
Routing	Expo Router (File-based)
Styling	NativeWind (Tailwind CSS)
State Management	React Context API
HTTP Client	Fetch API (Typed Wrapper)
Storage	AsyncStorage

Key Modules & Features

- **AI Legal Chat:** RAG integration with streaming support (SSE) and session management.
- **Contract AI:** Specialized analysis module for legal documents.
- **Secure Auth:** JWT-based workflow with automated silent refresh logic.
- **Lawyer Discovery:** Location-based search and mapping.

Backend Integration

Connected to the RAG backend at `http://192.168.1.8:8000`. Features automatic 401 handling and token persistence.
